Last Time: Vectors and Geometry 4) Cauchy-Schwarz Incardity La Triangle Inequality 4 7.0 = 121101 los(0) Ex: (on the angle between (1,1) and (1,0) $\frac{10-\frac{1}{10}}{(1,0)}$ $\frac{10-\frac{1}{10}}{(1,0)}$ 501: (1,1) (1,0) = 1 = 0 = 1 |(1,1)| = 127 1 (1,0) = 18+02 = 1 -, 1 = 12 | GS(8) So GS(8) = 1/2) i.e. O = arc (4s(元) = ar(4s(星)=五四 Exi Compute the angle between $\bar{k}=\left(\frac{1}{2}\right)$ and $\left(\frac{-1}{15}\right)=\bar{v}$. Sol: 1 v = -1+0+2-5 = -4 |M= 12+01+21+12=16 17/= 1(-1)2 + 12 + 12 + (-5)2 = 127+12 :. -4 = 16 127+72 605(0) yiels 0= arccos (-4) Today: Reduced Ron Echelon Form. (RREF) Ex: Comp.k the RREF of [2 4 0 0 0 -6] = A Sol: Perform row operations:

(i.e. the first nonzero entry in every nonzero rom is 1)

3 Every leading 1 is the only unzero entry

in its column. (4) Leading 1's appear in the some order left to right as they do top to bottom. (i.e. left most leading 1 is at top, etc). Exi Consider the netro M = [0110003] this maker IS in RREF! Claim: Every metrix has a unique RREF Defn: Matrices A al B are 1000 equivalent when there is a sequence of row operations transforming A into B. Lemi Elementary ron operations are reversible. Elementary operations: - Suap two rows,
- nuttiply a row by nonzero scalar. - All two rans, replace one. Ef: we treat each von apention separately: Swaps: $\{i \rightleftharpoons \{j \}$ $i \rightarrow \underbrace{\begin{bmatrix} i \\ j \end{bmatrix}}_{j \rightarrow i}$ is inverted by $\{i \hookleftarrow \{j \}\}_{j \rightarrow i}$

 $\alpha_{m_1}\vec{N}_1 + \alpha_{m_2}\vec{N}_2 + \cdots + \alpha_{m_m}\vec{N}_m = \vec{V}_m$

Every linear combination of Vijin, vm is a linear Combindin of U, uz, ..., un Pf: With the notation above, Consider the liver Combination of the vi's below: $b_1\vec{v}_1 + b_2\vec{v}_2 + \cdots + b_m\vec{v}_m$ = b, (a,, \vec{u}, + a,, \vec{u}_2 + \cdots + a,, \vec{u}_n) + b2 (a2,1 " + a2,2 " + ··· + a2, 1 ") + bm (am, 1 ", + am, 2 ", 2 + ... + an, " ") $= b_{1}\alpha_{1,1} \vec{\lambda}_{1} + b_{1}\alpha_{1,2}\vec{\lambda}_{2} + \cdots + b_{1}\alpha_{1,n}\vec{\lambda}_{n}$ $+ b_{2}\alpha_{2,1}\vec{\lambda}_{1} + b_{2}\alpha_{2,2}\vec{\lambda}_{2} + \cdots + b_{2}\alpha_{2,n}\vec{\lambda}_{n}$ + b, a,, i, + b, a,, i, + ... + b, a,, i, = (b, a,, + b, a,, + ... + b, a,,) \(\bar{u}_1 \) + (6,0,12 + 6292,2 + ··· + 6,0,2) 1/2 + (b, a,,n + b, a,,n + ... + b, a,n) Wn So the result is indeed a liver combination of U, 's 12 Cor: If A is som equiv to B, then the sons of B are linear combinations of sons of A.

pf: We proceed by notherstand induction on the number of elementary operations performed to obtain B from A. Base Case: If we perform O vow operations, he have the same matrix. So (1=1, 12=12,..., lm=1m are Iren combinations of the dd rms. Induction step: Assume this holds for any sequence of n elementary ron operations. Applying me more som operation yields a linear Combination of the resulting linear combinations (i.e. from the first n steps), because each row operation results in a liver combination of rms. Hence, by the linear combination lemma, the result is a linear combination of rows of A. By methematical industrin, the result halds

Next Time: Finish the proof, and discuss consequences of uniqueness "
